

On August 18, WCC signed a general contract with Sinoma Building Material Co., Ltd. to construct Ankang 4000 t/d cement clinker production line. This represents that WCC is marching toward the goal of becoming a large-scale cement enterprise in Shaanxi Province.

Ankang 4000 t/d cement clinker production line and 7.5 MW waste heat power generation project are located in Xunyang. The total investment in the project is 630 million yuan, with an annual output of 1.9 million tons of cement. The waste heat power plant is expected to generate 4,910 x 10⁴ kWh power per annum. This project is planned to start running early in 2009. After the completion of the project, it will become the largest cement production base in southern Shaanxi and will greatly ease the cement shortage in that area.
