

On October 23, Mr. Fang Weifeng, Mayor of Ankang, and Ankang city key projects inspection group and other government officials visited Ankang 4000t/d cement production line, cogeneration project and conveyor belt construction project.

Mr. Chen Zhixin, General Manager of Ankang plant, Mr. Cao Jianshun, Deputy General Manager of Ankang plant and other senior management gave them a warm welcome and a detailed introduction to progress in the conveyor belt construction and production. Mr. Chen said that the 7.8 kilometer conveyor belt was the longest in Asia and the company has successfully overcome some of the toughest technical difficulties . The conveyor belt construction has been completed and will soon commence operation. It will solve environment and safety issues during the limestone transportation process and will help relieve nearby transportation pressure.

Mayor Fang later visited the production line and cogeneration, and praised West China Cement's Ankang plant for driving local economic development and making a great contribution to conservation of resources, circular economic development, environmental protection and providing a solution to local security risks. The inspection group also praised West China Cement very highly.
