

WCC Sold Special Cement Overseas

On May 26, 108 tons of “Yaobai” aluminates cement was delivered from Huaxi plant to the port in Shanghai and then shipped overseas to the branch of the 8th bureau of China Railway in Congo on June 2. It marks the successful entrance of the “Yaobai” aluminates cement into the overseas market.

Aluminates cement is the first production and sales in WCC. The successful delivery of A600 type aluminates cement is of great significance to further meet the demands of the international market, enhance the sales competitiveness and increase the market share of the special cement.

It is understood that aluminates cement, with high early strength, fast setting and hardening as well as high hydration heat, is widely used in steel, petroleum, chemical and cement industries. Meanwhile, it has strong resistance to sulfate corrosion and high heat resistance, which can be used in emergency projects such as national defense, roads and special emergency repair, sulfate resistance engineering projects as well as winter construction projects.
