

About 250 Million Tons of Backward Cement Production Capacity Will Be Eliminated During the Twelfth-Five Period

In the national fifteenth joint conference of industrial managements of deputy provincial cities, Mr. Zhu Hongren, Chief Engineer of Ministry of Industry and Information Technology of PRC, emphasized that this year is a very significant year for the stable economic development after global financial crisis. The economy will keep moving towards the expected direction under macro-control.

Moreover, Mr. Zhu also indicated that the elimination of backward production capacity is still arduous currently. According to a preliminary analysis, it's estimated that approximately 70 million tons of smelt iron, 250 million tons of cement, 6 million tons of ferroalloy and 40 million tons of coke backward capacities will be eliminated during the Twelfth-Five Period.
